And best of all – you only need to add vinegar!

First of all, take 1 cup of milk and warm it in the microwave for about 1.5 minutes (you want it hot, but not boiling)

Next, stir in 4 tablespoons of vinegar.

The milk will start to clump as the acid in the vinegar breaks down the protein in the milk. Stir for about 1 minute.

Then, strain the milk through a strainer. All the clumps will stay in the strainer and really push on them to get all the liquid out.

Finally, transfer it to some paper towels and continue to press all the liquid out of the plastic milk. You can then shape it and colour it if you wish. Use a cookie cutter and then add a few drops of food colouring (optional).

Let them dry for two days.

PE 10 minute shake up
